

Year 4 Science at Elian's British School, La Nucia

Year 4 are enjoying Science. So far this academic year, they have learnt about friction and electricity, and are just beginning the new Science topic about moving and growing. The children are particularly excited about meeting the life size skeleton.

The weeks leading up to Christmas saw Year 4 completing their Science topic on Electricity. They particularly enjoyed the practical side of the topic that involved experimenting with circuits, batteries and bulbs.

The boys and girls of Year 4 have all had a good rest during the holidays and have now started work on their new Science topic, *Moving and Growing*. This involves learning all about how living things develop and grow.

The students are enjoying making friends with the school skeleton and discovering all about the bones that are in our bodies. They have been looking at how the bones fit together and enable us to move. Everyone is especially interested in looking at x-rays. The children have been bringing in their x-rays and we nearly have enough to make a whole body! The topic is proving to be extremely informative as the students are learning many new words and are extending their vocabulary of English.
